

**Plant design for classification, washing and sorting of minerals and mineral waste like:**

Gold, rare earth, incineration-slag, construction waste, used railway ballast, glas waste, street sweepings, beach and playground sand, channel sand, sewage treatment plant sand, filter sand, sand blasting waste, decontamination of soil.....etc.

Production rate -250 t/h

- 4 classification fraction in one module possible
- Washed by spraying and shearing (attrition)
- Sorting by screening, gravimetric (density), flotation, flocculation, magnet filtration, ballistic (surface separation)
- Closed water cycle
- Modular plant, easy to add and to expand
- Transportation in only 5 containers possible
- Semimobile design, fast to install

## WET PROCESSING

Processing plant for mineral processing and recycling
